## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3, 5-24, 26-53 are rejected under 35 U.S.C. 102(b) as being anticipated by Bauer (US # 5,670,853). See column 1, lines 19 to column 2, line 36.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4, 25, and 54 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bauer (US # 5,670,853) in view of Mizuta et al (US # 4,698,571). Bauer discloses the claimed invention except he discloses adjusting the position of the seat only, not the positions of the other components of the vehicle such as mirrors, steering wheel, etc. However, it is old and well known in the art to store optimum positions of various vehicle components used by the driver, such as mirrors, in memory and to automatically adjust

all of the various components based on the stored memory positions.. It would have been obvious to the ordinary practitioner to modify the system of Bauer to adjust the position of other components, besides just the position of the seat, as suggested by Mizuta et al, for the convenience and safety of the driver.
